***Evaluation***

*The number 209029 is an interesting prime number.*

*We are obliged to make one of those two assessments against this situation.*

- a) This is a coincidence.*
- b) The owner of this book knows all about the prime numbers. The owner of this book prepared this situation consciously.*

*Those who know that the set of prime numbers has a very narrow space in the number set shall know how low the probability of the first option is. But they may also insist on their allegation that this is a coincidence. But they will see by themselves that the first option will go down to a level of probability which is required to be neglected as they will observe the findings hereinafter. Forwhy, in the science of probability, successively predicted coincidences weakens the probability rate every time by binary division.*

table of symmetry

In the figure, (prime-prime) distribution of the homogenous and non-homogenous surahs is shown.

---

***Evaluation***

*Such a distribution amazes.*

--	--	--

--	--	--

***Evaluation***

*The homogeneous surahs show a (prime ~ non prime) distribution.*

*At this point non-homogeneous surahs come into mind. Is there a symmetrical reflection of this state in that case?*

### *Evaluation*

Now we are facing the symmetry of the distribution that we have seen it in the homogeneous surahs. In every stage, coming up of a new balance is a matter of fact.

### *Evaluation*

*Non-homogeneous surahs with respect to be a prime also exhibit a (prime ~ non-prime) distribution with respect to a positive or a negative difference between the (sequence numbers ~ number of ayats)*
